## Electrical Characteristics

## Total Clearing $\mathbf{I}^{\mathbf{t}} \mathbf{t}$

The total clearing $l^{2}$ t at rated voltage and at power factor of $15 \%$ are given in the electrical characteristics. For other voltages, the clearing $l^{2} t$ is found by multiplying by correction factor, K , given as a function of applied working voltage, $E_{g}$, (RMS).

## Arc Voltage

This curve gives the peak arc voltage, $U_{L}$, which may appear across the fuse during its operation as a function of the applied working voltage, $\mathrm{E}_{\mathrm{g}}$, (RMS) at a power factor of $15 \%$.
